## 1 Descarga de Dados GFS

Trabajaremos con el utilitario [siphon](#), que fue diseñado para tener acceso directo a al servidor [THREDDS](#)

Para utilizar el [siphon](#) debemos tener en consideración lo siguiente: - Python >= 3.5 - numpy >= 1.8 - pandas

Y otras informaciones que podemos encontrar en el manual de instalación de la herramienta.

### 1.1 Instalación de librerias necesarias

- Librería siphon

```
conda install -c conda-forge siphon xarray[complete] netCDF4
```

El [netCDF4](#) será instalado para ser utilizado como background del [siphon](#) a la hora de hacer los requerimientos

En este caso iremos a instalar el [xarray](#) para tener un control facilitado de los archivos [netcdf](#)

La lista completa de datos como medio grado entra en este [link](#)

```
[ ]: from siphon.catalog import TDSCatalog

# si el catalogo que se desea es de 0.5 grados
# best_gfs = TDSCatalog('http://thredds.ucar.edu/thredds/catalog/grib/NCEP/GFS/
˓→Global_0p5deg/catalog.xml')

# si el catalogo que se desea es de 0.25 grados
best_gfs = TDSCatalog('http://thredds.ucar.edu/thredds/catalog/grib/NCEP/GFS/
˓→Global_0p25deg/catalog.xml')

# lista de colecciones
best_gfs.datasets
```

  

```
[ ]: ['Full Collection (Reference / Forecast Time) Dataset', 'Best GFS Quarter Degree
Forecast Time Series', 'Latest Collection for GFS Quarter Degree Forecast']
```

## 1.2 Verificando datos disponibles

```
[ ]: best_disp = list(best_gfs.datasets.values())[0]
ncss = best_disp.subset()
query = ncss.query()
for lista in ncss.variables:
    print(lista)
```
